PROJECTS

- **School bus management** (Duration: 1 month)
It is a web based application for maintaining the data of student, bus, staff, monthly fees and salary. Front end is developed in HTML, BOOTSTRAP & PHP and Back end is designed using Mysql. To access the website authentication and sessions are maintained for user. It displays the data in the form of tables on the web page. Website provides facilities such as registering new student for bus service, maintaining records of monthly fees, assign respective bus to route etc. Also provides operations such as edit delete, update on . Monthly expenditure and gains and salaries are manipulated and stored in separate database, this information is available to admin only. It generates the list of students who did not paid their fees.
Implemented in HTML, PHP, Mysql
- **Second Home For CDAC students** (Duration: 1 months)
A leading web application Second Home for CDAC students, which helps students to search for accommodation near to the CDAC Centre. This website is designed only for the students. Administrator can add or update the flats and the room information and generates a monthly invoice report for each flat. Front end of this online application is designed using MS.NET and back end is supported with MS SQL Server database.
Implemented in MS.Net, MS SQL
- **Activity Tracker** (Duration: 6 months)
All the data of the employees stored in the database. At the time of attendance, In-time and out-time will get checked. If it matches then attendance is considered then in-time and out-time along with necessary information is stored into the database and as per attendance information their payslips is generated.
Implemented in MS.Net, MS SQL
- **Cosmetic Shoppy** (Duration: 2 months)
This is a complete Cosmetic Shop management system for tracking day by day activities of a cosmetic shop. Feature includes: Handling customer's orders, handle in-shop items management, handling customer information. Authorized access given to admin to add, update and delete sensitive data.
Implemented in J2SE, MS SQL
